0-10V connection

1. Brightness adjustment.

2. Color temperature adjustment.

3. Brightness and color temperature adjustment respective.

4. Brightness and color temperature adjustment simultaneous.

Push DIM/CCT connection

Dimming interface priority: First 0-10V, next Push DIM/CCT.

* Adopting constant power program design, it keeps the same brightness in color temperature dimming, twice the rated power load can be connected.
20W driver, 20W × 2CH load can be connected, the total power of the 2 channels will be kept in 20W.

Push DIM/CCT

Reset switch

- On/off control: Short press.
- Stepless DIM/CT: Long press.
- With every other long press, the light level goes to the opposite direction.
- Dimming memory: Brightness will be the same as previously adjusted when turning off and on again.
